

STEC PB SERIES GRADING BUCKET

The STEC PB series non-tilting planer buckets range in capacity from 500 to 2000 liters.

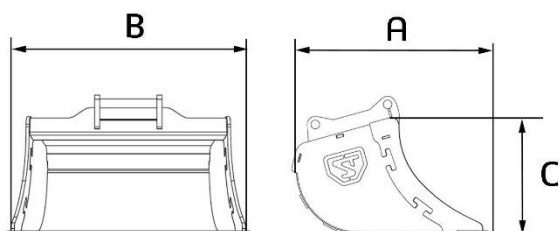

Our products' key benefits result from the use of the puzzle system, which ensures outstanding assembly quality and exceptional durability of weld joints. As a result, our products maintain their long-lasting resilience, even in the most challenging conditions.

STEC products are available in three different strength classes:

The BC series is designed for light and non-abrasive materials.

The GP series is designed for regular excavation work.

The HD series is engineered for heavy-duty operating conditions.
